

# Lecture 05

Introduction to Database

# Null Values

---

- It is possible for tuples to have a null value, denoted by null, for some of their attributes
- null signifies an unknown value or that a value does not exist.
- The result of any arithmetic expression involving null is null
  - Example:  $5 + \text{null}$  returns null
- The predicate `is null` can be used to check for null values.
  - Example: Find all instructors whose salary is null.  
`select name from instructor where salary is null;`

# Null Values and Three Valued Logic

- Three values – true, false, unknown
- Any comparison with null returns unknown
  - Example:  $5 < \text{null}$  or  $\text{null} <> \text{null}$  or  $\text{null} = \text{null}$
- Three-valued logic using the value unknown:
  - OR:  $(\text{unknown or true}) = \text{true}$ ,  
 $(\text{unknown or false}) = \text{unknown}$   
 $(\text{unknown or unknown}) = \text{unknown}$
  - AND:  $(\text{true and unknown}) = \text{unknown}$ ,  
 $(\text{false and unknown}) = \text{false}$ ,  
 $(\text{unknown and unknown}) = \text{unknown}$
  - NOT:  $(\text{not unknown}) = \text{unknown}$
  - “P is unknown” evaluates to true if predicate P evaluates to unknown
- Result of where clause predicate is treated as false if it evaluates to unknown

# Aggregate Functions

---

- These functions operate on the multiset of values of a column of a relation, and return a value
- - avg: average value
  - min: minimum value
  - max: maximum value
  - sum: sum of values
  - count: number of values

# Aggregate Functions (Cont.)

- Find the average salary of instructors in the Computer Science department

```
select avg (salary) from instructor where dept_name= 'Comp. Sci.';
```

- Find the total number of instructors who teach a course in the Spring 2010 semester

```
select count (distinct ID) from teaches where semester =  
'Spring' and year = 2010;
```

- Find the number of tuples in the course relation
- ```
select count (*) from course;
```

# Aggregate Functions – Group By

- Find the average salary of instructors in each department

```
select dept_name, avg (salary) as avg_salary from instructor  
group by dept_name;
```

*avg\_salary*

| ID    | name       | dept_name  | salary |
|-------|------------|------------|--------|
| 76766 | Crick      | Biology    | 72000  |
| 45565 | Katz       | Comp. Sci. | 75000  |
| 10101 | Srinivasan | Comp. Sci. | 65000  |
| 83821 | Brandt     | Comp. Sci. | 92000  |
| 98345 | Kim        | Elec. Eng. | 80000  |
| 12121 | Wu         | Finance    | 90000  |
| 76543 | Singh      | Finance    | 80000  |
| 32343 | El Said    | History    | 60000  |
| 58583 | Califieri  | History    | 62000  |
| 15151 | Mozart     | Music      | 40000  |
| 33456 | Gold       | Physics    | 87000  |
| 22222 | Einstein   | Physics    | 95000  |

| dept_name  | salary |
|------------|--------|
| Biology    | 72000  |
| Comp. Sci. | 77333  |
| Elec. Eng. | 80000  |
| Finance    | 85000  |
| History    | 61000  |
| Music      | 40000  |
| Physics    | 91000  |

# Aggregation (Cont.)

---

- Attributes in select clause outside of aggregate functions must appear in group by list
  - /\* erroneous query \*/  
select dept\_name, ID, avg (salary)  
from instructor  
group by dept\_name;

# Aggregate Functions – Having Clause

- Find the names and average salaries of all departments whose average salary is greater than 42000

```
select dept_name, avg (salary)
from instructor
group by dept_name
having avg (salary) > 42000;
```

- Note: predicates in the **having** clause are applied after the formation of groups whereas predicates in the **where** clause are applied before forming groups

# Null Values and Aggregates

---

- Total all salaries

```
select sum (salary ) from instructor;
```

- Above statement ignores null amounts
- Result is null if there is no non-null amount
- All aggregate operations except count(\*) ignore tuples with null values on the aggregated attributes
- What if collection has only null values?
  - count returns 0
  - all other aggregates return null
